Projects

DevHunter

- **Description:** The school graduate web project focused on job searching
- **Technologies:** C#, ASP.NET MVC, SQL Server, EF Core
- **Features:** User authentication for companies, job seekers, and administrators. User interactions include browsing job offers, submitting applications, and saving job listings. Company management includes **CRUD operations** for job offers and profile editing. **Rich textbox editor** for job descriptions and a **multi-select tag suggester**. Administrator access provides comprehensive site management. The search functionality includes **dynamic filtering** and keyword search. A **contact page** allows direct messaging to the administrator.

CarRental

- **Description:** A simple web application for car rentals.
- **Technologies:** C#, ASP.NET MVC, SQL Server, EF Core.
- **Features:** User registration and login. Browse and view detailed car information. Make reservations. **Admin panel** for managing car listings, reservations, and users. **Blog area** for user posts and information sharing.
